

**Making Your Vision Reality!**

## ENTERPRISE WIDE SOLUTIONS

*ResiliEnt is your Enterprise Solutions Partner – Your Success is Our Mission!* ResiliEnt Enterprise Solutions Consultants draw from vast experience designing and implementing enterprise solutions and strategies that leverage our clients' existing and anticipated resources (human, software and hardware) for a maximum return on investment (ROI). At ResiliEnt we believe enterprise-wide solutions and strategies must take into account the goals and the needs of all lines of business, departments, divisions, and/or any sub-divisions of an organization. Our consultants come to the table with a “best practices” view of business operations, management and systems technology - insight and understanding of current market issues and industry dynamics that we utilize to move your company forward. We believe that the key to a successful business is to better understand current market conditions and adapt and build the strategies and solutions that support future growth and sustainability of your business ~ *ResiliEnt “Best in Class”*

### Enterprise Assessments and Best Practices

- *Business Process Management*
- *Asset Allocation and Debt Restructure*
- *Governance and Regulatory Compliance*
- *Systems Process Management*
- *Architectural/Infrastructure*
- *Security*
- *Pre/Post Merger Information Technology (IT) Due Diligence*
- *System, Vendor and Technical Assets*
- *Best Practices and Standards*
- *Business Intelligence*
- *Enterprise Data Management*
- *Enterprise Information Reporting*

Does your operational, financial, sales and technology infrastructure support growth and sustainability? Are your compliance structure and data security and protection up to regulatory standards? The ResiliEnt Assessment process profiles your business from end to end - starting with a review of your operations process and procedures through to a review of existing systems/IT architecture and the processes as they relate to your current business and organizational needs. Our team will collaborate with you to identify where the real gaps are and recommend actionable solutions that work in tandem with your organization to align technology and business for uninterrupted and continued growth.

### Enterprise Application Integration (EAI) and Conversions

- *Tactical Solution Design*
- *Systems Integration*
- *System/Application/Product Configuration*

Can your enterprise technology and system architecture match the pace of business? Are your database applications and networked applications able to share and interact between departments and across geographies? Defining a strategy as your business grows; streamlining processes and keeping the company interconnected can reduce Total Cost of Ownership (TCO), increase business agility and improve organizational efficiency. ResiliEnt consultants recognize the need for information and applications to be transferred across and shared between systems and will work with you to identify and align technology with business priorities. ResiliEnt expertise can define an integration strategy for networked applications and data sources in areas such as inventory and procurement, human resources (HR), sales automation and database management that will enable your organization to attain seamless information flow, application integration, business process integration and optimization.

### Global Information Technology (IT) Infrastructure and Implementation

- *Application Architectural/ Infrastructure Redesign*
- *Enterprise System Architecture/Infrastructure Strategy and Execution*
- *Managed Information Technology Infrastructure*
- *Legacy Conversions to Newer Technologies*
- *System, Vendor and Technical Assets Management*
- *System and Business Process Automation*

Are you developing a new line of business, experiencing growth or in a post-merger environment? Defining a strategy to streamline processes and keep the company interconnected can reduce Total Cost of Ownership (TCO), increase business agility and improve organizational efficiency. ResiliEnt consultants recognize the need for information and applications to be transferred across and shared between systems and will work with you to identify and align technology with business priorities. ResiliEnt will define an integration/conversion strategy for internal and external applications and data sources that will enable your organization to attain seamless information flow, application integration, and business process optimization.

## Enterprise Operational Automation Strategies and Implementations

- *System and Business Process Automation*
- *Automate manual processes and or tasks across the enterprise for operational efficiency*
- *Scale systems operations to dynamically leverage cloud, virtualization and other innovative technologies*

Are you looking for a strategy to align IT and business strategies in post- merger integration? Converging toward an agile and centralized “virtual” infrastructure to improve productivity without increasing headcount or overhead? Is it time to assess existing legacy applications and data centers that have limited scalability? ResiliEnt consultants bring the needed expertise to define and implement an operations automation strategy that can align your company’s business strategy and the business critical applications to maximize efficiency and sustain cost performance. Effect? Agility and responsiveness to market demands and opportunities; effective end to end governance and risk management with better transparency between business process and operational execution; consolidation for optimal resource usage and configuration in dynamic virtual and cloud environments.

## Enterprise Information Management Business Intelligence (BI)

- *Dashboards /Customizable Key Performance Indicator’s (KPI)*
- *Actionable BI*
- *Analytics*
- *BPM scorecards*
- *Enterprise Reporting including Document and Content Management, User Guides*

Where are you in the BI Maturity Lifecycle? Smart business intelligence and data warehousing solutions can be a strategic decision making tool. Streamlining business intelligence and disparate data under a clear cut strategy allows key functional areas (finance, HR, sales and marketing, procurement) to interact and collaborate; can reduce Total Cost of Ownership (TCO), increase business agility and improve organizational efficiency. Dashboards, reporting applications, BI portals ,key performance indicators (KPI’s), statistical and predictive analysis; ResiliEnt consultants will bring their extensive understanding of Information Management to the specific needs of your business and will work with you to develop practical business solutions that bring change and produce tangible results.

## Enterprise Information Management Data Access, Organization and Governance

- *Data Architecture Management*
- *Data Model Development*
- *Data Integration Management*
- *Data Quality Management*
- *Data Security Management*
- *Metadata Management*
- *Data Warehousing and Database Administration*

Do you have silos of data or do you have one reliable source of the truth? Unreliable or disparate data can impact nearly every area of your business. ResiliEnt consultants bring their broad expertise in Enterprise Information strategies to assist in defining the BI and Data Warehouse strategies and solutions you need to make information a strategic asset and establish a strong data foundation on which business strategies can be built to achieve enterprise excellence. ResiliEnt Business Solutions will bring new and innovative ways of thinking to your data center and information management needs that will facilitate collaboration across the company, standardize data across key functional areas, improve regulatory compliance, control and risk management, reduce information costs and increase productivity.

## Enterprise Project, System, or Infrastructure Outsourcing

Can your current operating infrastructure model handle your future state needs? Do you have an efficient & effective service delivery model? Is your systems and technology strategy reliable, scalable and adaptable? Project, system and/or infrastructure outsourcing can reduce complexity, increase agility and responsiveness and reduce or shift infrastructure spending to optimize business results. Move to the cloud? Outsource? Consolidate vendors? Let ResiliEnt consultants help you define the right service delivery model to support your business. ResiliEnt consultants have an agnostic product approach providing the optimal enterprise level data and IT infrastructure model that will align your business strategy with IT capabilities, assets and applications and work with your IT staff to develop, manage the project plans to execute the implementation.
